

Incontinence urology products by Curan: innovative, extra hygienic and very comfortable

The development and production of innovative, highly reliable products, made according to the wishes of end-users and professionals: that is what Curan stands for. All over Europe we supply a sophisticated range of urology products and catheters for people to use at home. Products that stand out thanks to novelties such as smoothly polished eyelets, unparalleled flexibility paired with the right degree of solidity and our unique Blue Grip®: an ingenious tool for inserting the catheter in a hygienic way, without having to touch it with the hands. Moreover, all our products are free from the aggressive softening agent DEHP and they are available in various styles and sizes - with or without a hydrophilic coating. Safe, comfortable and easy to use.

Extraordinarily strict quality control

All Curan products meet the highest quality requirements, and comply with European standards. Before a product leaves our production unit, it has passed a number of very strict quality checks. This is how we can offer comfort and the highest degree of security. Our production unit is CE certified and has EN ISO 9001:2000 and EN ISO 13485:2003 certification. Furthermore, our cleanroom is certified according to class 10.000.

Permanent innovation

Asking questions, listening, thinking and doing, that is what Curan is all about. We are obviously convinced of the excellent quality of our products. But if we do see room for improvement, we act upon it. This is why we ask our end-users and the professionals - physicians and nursing staff - about their findings and ideas on a regular basis. Also, we have a Research & Development department that is extremely well-equipped, where we develop new products and test them extensively. In doing so, we always keep our main goal in mind: to realize innovative, comfortable products that make life easier for both end-users and the professional.

Cure hydrophilic coated catheters

For intermittent self-catheterization. DEHP-free

The Cure hydrophilic coated catheters are provided with a hydrophilic coating, free from the aggressive softening agent DEHP and packed sterile and individually, for single use. Both the male and the female catheters are fitted out with smooth polished eyelets, which makes insertion risk-free and prevents irritation. Furthermore, all male catheters are fitted out with our unique Blue Grip®; an ingenious tool for inserting the catheters without having to touch it with the hands. This is much easier, more hygienic and it considerably reduces the risk of infections.

• Blue Grip®

• Proper flexibility

• The hydrophilic coating is ready for use after 25 seconds

The main advantages at a glance

- Free from the aggressive softening agent DEHP
- Fitted out with smoothly polished eyelets, which prevents irritation during insertion
- Hydrophilic coating (activated after 25 seconds)
- Easy and hygienic insertion (less risk of infection) with unique Blue Grip® insertion device on all male versions

Curan Advantage hydrophilic coated catheters

Ready to use with integrated water pocket

The Curan Advantage hydrophilic coated catheters are ready to use thanks to the extra element: the integrated water pocket. This leak-free water pocket, filled with sterile water, can be activated with a light squeeze. The sterile water activates the hydrophilic coating within 25 seconds. This promotes additional comfort during insertion. Thanks to the handy hanger sticker, the packaging can be placed vertically in any room during activation of the comfort coating. In the meantime, the user can prepare for catheterization. Furthermore, the male catheters are fitted with our unique Blue Grip®; an ingenious tool for inserting the catheter in a hygienic way, without having to touch it with the hands. The Blue Grip® is easy, more hygienic and significantly decreases the risk of infection. The Curan Advantage is free from the aggressive softening agent DEHP and packaged individually and sterile, for single use. The Curan Catheters are fitted with smoothly polished eyelets, making insertion risk-free and preventing irritation.

• Water pocket

• Blue Grip®

• Polished eyelets

The main advantages at a glance

- Ready to use thanks to the additional integrated water pocket
- The water pocket can be activated with a simple squeeze
- The sterile water activates the comfort coating
- Guaranteed leakage-free
- Handy hanger sticker for vertical placement in any room during activation time
- Easy and hygienic insertion (less risk of infection) thanks to the unique Blue Grip®
- Free from the aggressive softening agent DEHP
